Episode Reflection Responses

Question 1:

Identify three possible, environmentally sustainable, courses of action that you could recommend for the prairie dog problem:

Target Word Count: 100-300 words

Actual word count: 97 words

One could try to reestablish the population of the prairie dogs natural predators. This could be done by erecting a nesting area in the center of the prairie dog reserve far enough away from the human population as to not frighten or push them away. These natural predators have never caused any issues before and would likely not now either.

We could attempt to rezone the reserve as well as the land surrounding it. While moving the prairie dogs backwards from their current area, implementing a new boundry for human living space may not be that difficult.

Question 2:

Please reflect on the impact of the decisions you made as Council President at that time. What results were you pleased with and what would you do to sustain those results in the future?

Target Response Word Count: 100-300 words

Actual word count: 107 words

I am pleased with the results of each action taken to restore balance to our ecosystem. However, I would have liked to see the results from building newer and bigger schools. My fear was that the increased land usage for this would have only added to our problems and masked any educational benefits we might have gained. In order to sustain the results that we have achieved, we will need to keep the entire ecosystem in the forefront of our minds going forward. As long as we continue on our current path and not take any action that would undermine our progress we will have no issues.

Question 3:

On the other hand... What results were you disappointed with and what would you do differently if you had the chance?

Target Response Word Count: 100-300 words

Actual word count: 42 words

As I mentioned, I am completely satisfied with our progress with this issue and I believe our community as a whole is as well. Aside from the question I have regarding upsizing and relocating the schools, I would not do anything different.
