

Basic Math

Homework Packet #4

Due 5th Session

Homework Rules

All homework should be done in pencil and be legible.

(Unless stated otherwise)

All decimal answers are to be rounded to **three decimal places**.

All fraction answers are to be in "**lowest terms**"

When converting, you are expected to use **16ths**.

Show all work for the Homework

All answers will include labels or unit of measurement required in the question.

Name: _____ Date: _____

Area

Solve the following problems. Round decimal answers to the nearest hundredth.

1. _____ A flat shed roof has a length of 24'-6" and a width of 14'-9". What is its area?

2. _____ If the roof framing in the problem above is sheathed with $\frac{5}{8}$ " thick sheets of 4 x 8 plywood, then how many whole sheets must be purchased to cover the roof, assuming no waste?
3. _____ On average, a roll of 30 lb. roofing felt covers 200 sq. ft. How many full rolls are required to cover the roof?
4. _____ A millwright is assigned to bore a hole into a piece of $\frac{1}{2}$ " steel stock. If the stock measures 2.625" x 6.875" then what is its area after the hole is machined?

5. _____ Some $\frac{3}{4}$ " x $3\frac{1}{4}$ " x random length pieces of flooring are installed parallel with the long wall of a room measuring 21'-2 $\frac{3}{4}$ " x 14'-8 $\frac{1}{2}$ ". What is the area of the room?

6. _____ In the problem above, if $\frac{1}{2}$ " is needed for expansion at all the walls, then how many rows of flooring will be installed?
7. _____ If the cost of the carpet in the problem above is \$14.95 per square yard, then what is the cost of the material needed?
8. _____ A countertop is needed for a custom-built island cabinet base unit. The cabinet base measures $39" \times 54"$. If there is a 1" overhang on each side of the base unit, then what is the area of the countertop in square inches?
9. _____ Formwork is set in place for a pour. The configuration of the panels is shown below. How many square feet of formwork are used?

10. _____ What is the area of a room that measures $22'-8\frac{1}{2}" \times 16'-11\frac{1}{4}"$?
11. _____ A wall of a room is 26' long and 9'-0" tall. If the wall has a $3' \times 7'$ door opening and a $4' \times 4'$ window opening, then how many $4' \times 9'$ pieces of sheetrock are required to drywall the wall? Do not figure waste and round up to the next whole sheet of drywall.
12. _____ A UBC member builds a wood fence 4'-6" high. 1×6 s are used as pickets spaced $1\frac{1}{2}"$ apart. If there are no gates in this portion of fence, then how many square feet of fence are actually covered by 1×6 material if the fence is $33'-8\frac{1}{2}"$ in length? The 1×6 measures $\frac{3}{4}" \times 5\frac{1}{2}"$

Name: _____ Date: _____

Area of Circles

Calculate the area of each of the circles shown. Round answers to the nearest hundredth.

1. $r = 7''$ Area = _____

2. $d = 12'-6''$ Area = _____

3. $d = 3'$ Area = _____

Basic Math Terms

Due 5th Session

1. Area
2. Centimeter
3. Meter
4. Pitch
5. Run
6. Span
7. Subtraction
8. Square Feet
9. Square Root
10. Yard

4. $r = 14 \frac{1}{4}"$ Area = _____

5. $d = 13'-3"$ Area = _____

6. $r = 150'$ Area = _____
